

repressor construct

for off-targeting

construct

- currently: **standard backbone** pSB1A3
- **BGH terminators** for introduction of BamHI cutting site
 - note: BamHI compatible with BglII for cloning into pTR-UF3 backbone
 - virus production purpose
- **promoters**: CMV or RSV
- **miR bs**: **perfect binding sites** against miR-122, once or twice
 - purpose: off-targeting
 - cloning of miR binding sites within XhoI and XmaI

**Only RSV construct with two binding sites is missing.
Standardization ongoing.**
